

# Angular Cheat Sheet

## Create Application

```
ng new my-app
```

(ng is the [Angular CLI](#))

Questions asked during project creation:

Angular routing? Yes/**No**

Stylesheet format?

- **CSS**
- SCSS
- Sass
- Less

## Serve the Application

```
cd my-app  
ng serve --open
```

ng serve builds the application and starts the development server.

The `--open` flag opens the running application in a browser.

## Bundle for Distribution

First, go to the root of the project:

```
cd my-app
```

Then, you can build for dev:

```
ng build
```

Or for production, which will result in smaller files:

```
ng build --prod
```

Production files are generated in the `dist/` directory.
