

# Initialize Jupyter Project with UV

```
mkdir jupyter_project  
  
cd jupyter_project  
  
uv init  
  
uv add ipykernel
```

(If you prefer, you can install ipykernel with the pip interface instead: `uv pip install ipykernel -U --force-reinstall`)

1. Open project folder in VS Code. (Make sure you have the Python extension installed)
2. Create a test.ipynb file and open it.
3. Select the Python interpreter in the virtual environment.

`python`
