

Markup and Code-Behind Examples for reveal.js

Markup

Animate Slide Transitions

The `data-auto-animate` decorator causes automatic display transition styling of matching header markup on slides.

```
<section data-auto-animate>
  <h2>Slide One</h2>
  <p>Contents</p>
</section>
<section data-auto-animate>
  <h2>Slide Two</h2>
  <p>Contents</p>
</section>
```

Block Quote

```
<blockquote>
  Text of block quote.
</blockquote>
```

Fragments

Show text incrementally on a slide:

```
<section>
  <h2>Fragments</h2>
  <p>Hit the next arrow...</p>
  <p class="fragment">... to step through ...</p>
  <p><span class="fragment">... a</span> <span
class="fragment">fragmented</span> <span class="fragment">slide.</span></p>
</section>
```

Image Backgrounds

```
<section data-background="image.png">
  <h2>Data Backgrounds</h2>
```

```
</section>
```

Scale Image

```

```

Small Text

Nice formatting for long paragraphs.

```
<small>  
Text of paragraph.  
</small>
```

Syntax Highlighting

```
<p> <pre><code class="language-c"> printf("Hello!\n");  
</code></pre> </p>
```

Customization

Default Background Image

Add this *after* the Reveal.initialize block:

```
for (var slide of document.getElementsByTagName('section')) {  
  if (!(slide.getAttribute('data-background') || slide.getAttribute('data-background-video') || slide.getAttribute('data-background-iframe') || slide.getAttribute('data-background-image')))) {  
    slide.setAttribute('data-background-image', 'img/default-background.png')  
  }  
}
```

Make Text Stand Out

For text that is hard to read, you can make it stand out by enclosing it in a translucent box.

First, create a css/custom.js file, and add this style:

```
.background-box-black {  
  background-color: rgba(0, 0, 0, 0.8);  
  color: #fff;  
  padding: 20px;  
}
```

Include the custom CSS in your index.html:

```
<link rel="stylesheet" href="css/custom.css">
```

Then, use it in a slide like this:

```
<section>  
  <div class="background-box-black">  
    <p>Some text!</p>  
  </div>  
</section>
```

Here's some additional CSS for enhancing text display:

```
.green-bold {  
  color: green;  
  font-weight: bold;  
}  
  
.red-bold {  
  color: red;  
  font-weight: bold;  
}  
  
.blue-bold {  
  color: blue;  
  font-weight: bold;  
}  
  
.simple-quote {  
  background-color: rgba(0, 0, 0, 0.8);  
  font-style: italic;  
}  
  
.force-italic {  
  font-style: italic;  
}
```
