

# Pip Behind a Corporate Proxy

Call Pip like this:

```
pip3 install --trusted-host pypi.org --trusted-host pypi.python.org --  
trusted-host files.pythonhosted.org <package-name>
```

Without the trusted-host options, you get something similar to this:

```
Could not fetch URL https://pypi.python.org/simple/<package-name>/:  
There was a problem confirming the ssl certificate: [SSL:  
CERTIFICATE_VERIFY_FAILED] certificate  
verify failed (_ssl.c:777) - skipping
```

[python](#)
